

Makson Industries Drastically Improves Surface Finish and Reduces Programming Time by 30% by Investing in Pro/TOOLMAKER

Makson Industries in Aurangabad, West India is a manufacturer of machine tool parts, jigs, fixtures, tools and dies.

BUSINESS INITIATIVE

- Makson Industries had the challenge of improving both the machining time and the surface finish of their parts.
- They were looking for an easy to learn and use CAM tool which also had built-in post processors.

SOLUTION

- Makson Industries chose to invest in Pro/TOOLMAKER.

RESULT

- The surface finish achieved has been very impressive and improved drastically.
- Time required for programming and rework has been reduced by 30%.
- Time spent on finishing operations has been reduced by 10%.
- Output rejection rate has been reduced by 5%.
- Compatibility of post-processors with all the machines has been commendable.
- Makson Industries are now confident of a gouge free execution in manufacturing.

“The time required to generate toolpaths is convenient and is much faster than before. This enables me to personally get a hands on during peak work loads.”
