

# PTC Integrity™ Process Consumer™

PTC Integrity Process Consumer provides a highly scalable environment for your organization’s operational, engineering and development process deployment.

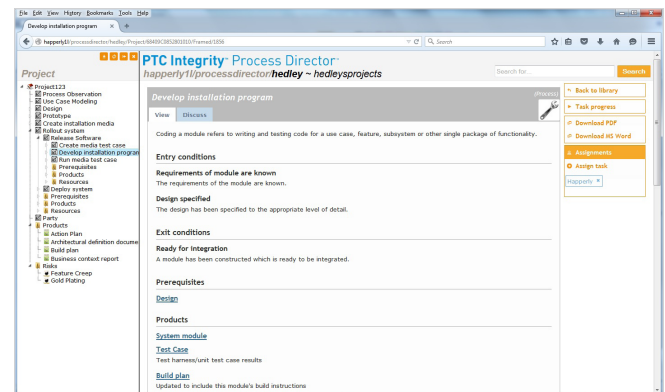

Companies typically have two groups of people involved in process improvement; those who write the processes and those who need to implement them. The second group, implementing the process, is much larger and thus the problems can be more complex. While PTC Integrity™ Process Director™ is a great tool for process authoring and management, without true process implementation, your investment in process authoring will be wasted and your valuable process will not be adopted.

PTC Integrity Process Consumer, a companion tool for PTC Integrity Process Director, is a scalable and contemporary solution for all process initiatives that runs on the same highly scalable, multi-user repository to provide ‘active’ process access for all processes consumers. This tool implements the deployment phase of PTC Integrity Process Perspective; our unique, method agnostic technique for process Definition, Selection, Management, Deployment, Measurement and Improvement. This makes it an ideal deployment environment for your organization’s processes.

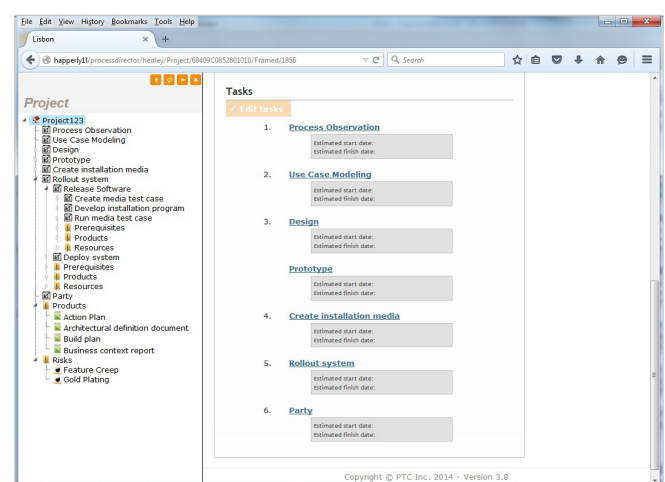

## Key features

Whether the out-of-the-box PTC Integrity Process Director best practices (e.g. OOSEM, Waterfall, Spiral, Staged, To Budget, etc.), your imported process documentation, newly authored processes or a mix of all three are being used, access to all of them is available from a PC web browser, smartphone, or tablet. Automatic email notifications are sent when a task is allocated, when it’s close to the start date or when the previous task has been completed. Or a personal task list can be directly accessed by the user. Both options link directly to the relevant process

help, example deliverables, other resources involved, associated risks and which techniques, tools and patterns to apply.

PTC Integrity Process Director rich process content

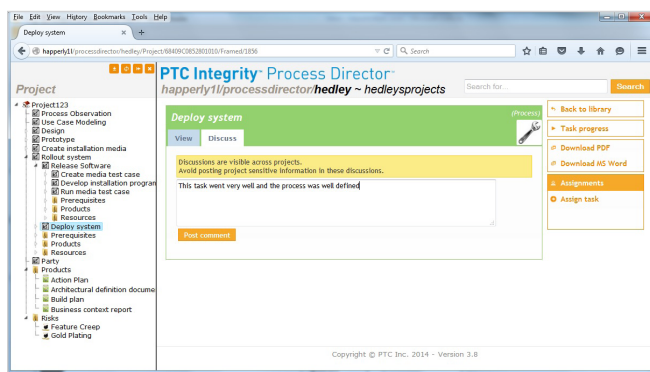

Multiple navigation options for process access

PTC Integrity Process Consumer provides a highly scalable and appealing environment for your organizations operational, engineering and development process deployment.

- Accelerate process adoption with active process rollout of PTC Integrity Process Director
- Save time with email notifications and To Do lists for all allocated tasks
- Gain timely process help with active process mentoring
- Streamline development with example deliverables, templates and techniques
- Real-time feedback with simple task and deliverable progress reporting
- Access from anywhere with a browser-based user interface
- Improve processes iteratively with feedback loop and online discussions

PTC Integrity Process Consumer provides the facilities needed to record the progress of each task, complete deliverables and complete tasks. If help is needed along the way, as well as the process documentation, then the user can discuss the process, online, with the process author and even make recommendations. The discussions and feedback taking place in PTC Integrity Process Consumer are invaluable for identifying process improvements.

Process progress reporting and improvement feedback loop

PTC's methodological approach, the PTC Integrity Process Perspective, ensures that nothing is missed and that your process definition and deployment programs exceed the organizations quality requirements. Inherent consistency, best practice reuse, automated reviews and feedback loops guarantee process excellence, differentiating the organization from competitors.

PTC Integrity Process Director's Library Structure views, Navigation Trees and Process Diagrams helps users visualize and understand the processes. These views are consistent, no matter who authored the process. Additionally, the powerful search facility and 'tag clouds' allows users to find the information they are looking for quickly. This means users can focus on understanding the essential parts of the processes and completing their tasks.

PTC Integrity Process Director's project oversight then gathers metrics from the process consumers to show how the processes are being used and related project success. This closes the loop so organizations can then prove their return on these process investments.

#### Platform specifications:

- Microsoft Windows®, iOS, Android
- Browser: Internet Explorer®, Mozilla Firefox®, Chrome®, Safari®
- Database: SQL Server
