

# PTC Value-Ready Deployment for Conflict Minerals

A proven, pre-configured conflict minerals compliance offering that can be deployed in as little as one week

Leverage PTC's extensive experience to significantly reduce implementation cost and risk, and accelerate conflict minerals compliance.

Implementing new technology solutions can pose significant challenges to companies and their IT organizations. Limited resources, competing priorities, and a lack of industry know-how can stall implementations and lead to software performance issues, unexpected upgrade fees to meet evolving regulation requirements, and ultimately delays or errors in conflict minerals reporting.

The PTC Conflict Minerals Module enables companies to systematically address their conflict minerals requirements. In order to deliver maximum business value and accelerate your conflict minerals compliance program, the PTC Value-Ready Deployment for Conflict Minerals provides a pre-defined implementation approach, a scalable platform that grows to meet evolving compliance program needs, and a pre-packed learning and adoption program to help achieve faster time-to-value. PTC Global Services provides rapid deployment options for both private cloud-hosted services and on-premise management.

## Accelerate your compliance program and achieve faster time-to-value with PTC Value-Ready Deployment for Conflict Minerals:

- Comprehensive capabilities delivered in a standard offering
- A scalable solution that grows to meet your program's evolving conflict minerals requirements
- Flexible procurement and deployment options lowers your total cost of ownership
- Experienced deployment team provides compliance know-how and global coverage

## Key benefits

### Achieve rapid compliance

Companies are expected to prove due diligence efforts to the SEC with the ultimate goal of achieving a “conflict-free” status. PTC Value-Ready Deployment can have the PTC Conflict Minerals Module up and running in as little as one week, enabling companies to accelerate their compliance program and efficiently reach their reporting targets.

### Eliminate costly customizations

A standard offering increases efficiency with the elimination of non-value-add configurations and customizations. With PTC’s extensive experience, companies can immediately focus on meeting conflict minerals compliance requirements instead of trying to understand the underlying technology capabilities needed to run an efficient compliance program.

### Reduce deployment risk

For more than 10 years, PTC has helped leading global enterprises create and sustain successful materials compliance programs. By leveraging a prescribed phased deployment process that has been tested and proven in the marketplace, companies can further mitigate risk and achieve faster time-to-value.

### Leverage a scalable solution

As your conflict minerals program requirements continue to evolve, the PTC solution will scale to meet your needs (e.g., providing the functionality you need to meet the challenges that arise when the ‘undeterminable status’ expires). With a scalable solution platform, companies can rapidly adopt new capabilities, stay current with changing compliance targets, and avoid expensive upgrades.

## Flexible deployment options

### PTC Managed Services

PTC Managed Services brings comprehensive support and industry-leading expertise in the areas of:

- **Rapid deployment:** The PTC Conflict Minerals offering can be online and ready for use in less than one week
- **Secure hosting:** Private cloud hosting in a secure PTC data center eliminates the need to allocate data center space or acquire depreciating hardware
- **Application management:** Experienced PTC experts help with configuration, integration, monitoring, tuning, patches, and upgrades
- **Value assurance:** A single point of contact for coordination with PTC technical support and product management, and responsibility for overall performance and value

### Key features

- Rapid deployment on properly sized hardware
- Secure hosting in SSAE-16 certified data centers
- IT administrators to monitor and maintain performance
- Application SLAs based on 99.5% availability
- Tight integration with PTC technical support and R&D
- Flexible term licenses

### On-premise management

Companies interested in deploying and managing the PTC Conflict Minerals Module on their own IT infrastructure can take advantage of PTC’s and PTC partners’ implementation expertise. Based on industry best practices for conflict minerals and enterprise software implementation, the PTC Value-Ready Deployment program minimizes cost and risk.

## Key features

- Rapid deployment so that companies are up and running in 30 days or less
- Pre-defined business processes and best practices specific to conflict minerals compliance requirements
- Preconfigured data model
- Pre-defined infrastructure architecture
