vuforia® chalk™
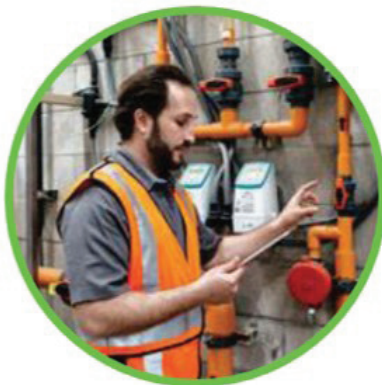

Start a session using Vuforia Chalk

Collaborate with employees within your organization

>> Add other Chalk users by selecting **Add Contact**, then **From Company Directory**.

>> The contact list in the app shows everyone you've added as a contact. It is saved locally on your device.

>> Find the contact you would like to start a session with and select **Start Session**.

Collaborate with users outside your organization

>> Premium users with host capabilities can create and send a unique 9-digit **Connect Code** to collaborate with people who do not have a Chalk account.

>> These contacts only need the Chalk app and the **Connect Code** to join the session. This feature is great for situations where the "guest" doesn't plan to use Chalk very often.

>> They could be a 3rd-party contractor or your end customer in a service model.

Collaborate with multiple experts

>> Depending on how your administrator has configured Chalk, either one other participant or up to five participants can join your Chalk session.

>> From the lobby, share the **Connect Code** with participants using the share icon next to the code. Once all participants have joined, select who will share their view by tapping on the green circle next to their name. Then, press **Enter Session**.

>> Use the Participant Panel to view, mute, and remove participants, or to share the Connect Code. Access the panel by tapping the icon in the menu or the participant bubbles at the top of the session.
