Live Classroom Curriculum Guide

- Mathcad Prime 3.0 Essentials
- Advanced Functionality using Mathcad Prime 3.0
Mathcad Prime 3.0 Essentials

Overview

Course Code: TRN-4010-T
Course Length: 2 Days

In this course, you will learn the basics of Mathcad Prime. You will learn about Mathcad Prime’s extensive functionality, such as opening and working with Mathcad files, navigating workspaces, defining variables and expressions, and solving equations. In addition, you will learn how to plot graphs, solve for roots, and manipulate data.

At the end of each module, you will complete a set of review questions to reinforce critical topics from that module. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

Course Objectives

- Open and save Mathcad files
- Navigate the Mathcad workspace
- Develop Mathcad templates
- Identify and format math and text regions
- Develop and edit math expressions
- Define, evaluate, and use variables
- Assign an expression retroactively
- Define and evaluate user-defined and built-in functions
- Define, evaluate, and use range variables
- Use units in calculations
- Plot 2-D and 3-D graphs
- Solve for the roots of a function with a single independent variable
- Symbolically solve equations
- Numerically solve a system of linear and nonlinear equations
- Solve unconstrained and constrained optimization problems
- Solve ordinary differential equations
- Create a program within the Mathcad worksheet using Mathcad’s programming features
- Import and export data
- Smooth, interpolate, and regress data
Prerequisites

• None

Audience

• This class is intended for novice and intermediate Mathcad users. People in related roles will also benefit from taking this course.

Advanced Functionality Using Mathcad Prime 3.0

Overview

Course Code: TRN-4020-T
Course Length: 1 Day

In this course, you will learn advanced functionality using Mathcad Prime 3.0. You will learn about Mathcad Prime 3.0 advanced functionality in data exchange and analysis, programming, symbolics, and differential equations.

At the end of each module, you will find a set of review questions to reinforce critical topics from that module. At the end of the course, you will find a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

This course is also applicable to Mathcad Prime 3.1.

Course Objectives

- Use an Excel component as a function
- Use the built-in function genfit to fit a model function to a set of data
- Determine the quality of fit of a predicted model to a set of data points by calculating the sum of the squares of the residuals and the confidence intervals of the data points
- Use the built-in functions polyfit and polyfitc to model data
- Explain the use of two Mathcad custom functions written for interfacing with an HDF5 file format
- Create a PTC Mathcad program
- Use conditional statements
- Use looping constructs
- Use symbolic calculation features
- Use symbolic keywords
- Solve an ordinary differential equation
- Solve a partial differential equation
- Solve a nonlinear differential equation
Prerequisites

- Mathcad Prime 3.0 Essentials or equivalent Mathcad Prime experience

Audience

- This class is intended for those who are intermediate or advanced users of Mathcad. People in related roles will also benefit from taking this course.

Web Based Curriculum Guide

- Mathcad Prime 3.0 - Application Orientation
- Mathcad Prime 3.0 - Working With Units
- Mathcad Prime 3.0 – Plotting
- Mathcad Prime 3.0 - Symbolics and Solving
- Mathcad Prime 3.0 - Programming Mathematical Expressions
- Mathcad Prime 3.0 - Data Exchange and Analysis
- Design of Experiments Using Mathcad Prime 3.0
- Mathcad Prime 3.0 Integration with Creo Parametric 2.0
Overview

Course Code: WBT-4010-A
Course Length: 7 Hours

In this course, you will learn the essentials of Mathcad Prime and understand how it reinforces Mathcad Prime’s extensive functionality using clear, straightforward instruction and examples. This course will familiarize you with many of Mathcad Prime’s critical features to ensure immediate application of the product.

You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

- Open and save Mathcad files
- Navigate the Mathcad workspace
- Identify and format math and text regions
- Develop and edit math expressions
- Define, evaluate, and use variables
- Assign an expression retroactively
- Define and evaluate user-defined and built-in functions
- Define, evaluate, and use range variables
- Define and use vectors and matrices

Prerequisites

- None

Audience

- This class is intended for the novice or intermediate user of Mathcad.

In this course, you will learn the essentials of working with units using Mathcad Prime. You will understand how it reinforces Mathcad Prime's units functionality using clear, straightforward instruction and examples. At the end of the course, you will complete a course assessment in Pro/FICIENCY intended to evaluate your understanding of the course as a whole.

Course Objectives

- Use units in calculations

Prerequisites

- WBT–4010–A Mathcad Prime 3.0 – Application Orientation

Audience

- This class is intended for the novice or intermediate user of Mathcad.

Mathcad Prime 3.0 - Plotting

Overview

Course Code: WBT-4010-C

Course Length: 2 Hours

In this course, you will learn the essentials of 2-D and 3-D plotting using Mathcad Prime. You will understand how it reinforces Mathcad Prime's plotting functionality using clear, straightforward instruction and examples. You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

- Plot 2-D and 3-D graphs
- Format 2-D and 3-D graphs

Prerequisites

- Mathcad Prime 3.0 – Application Orientation

Audience

- This course is intended for the novice or intermediate Mathcad user.

Mathcad Prime 3.0 - Symbolics and Solving

Overview

Course Code: WBT-4010-D
Course Length: 2 Hours

In this course, you will be introduced to the essentials of symbolics and solving equations using Mathcad Prime. You will understand how it reinforces Mathcad Prime’s symbolics and solving functionality using clear, straightforward instruction and examples.

You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

- Solve for the roots of a function with a single independent variable
- Numerically and symbolically solve a system of linear and nonlinear equations
- Solve unconstrained and constrained optimization problems
- Solve ordinary differential equations

Prerequisites

- Mathcad Prime 3.0 – Application Orientation

Audience

- This course is intended for the novice or intermediate Mathcad user.

Mathcad Prime 3.0 - Data Exchange and Analysis

Overview

Course Code: WBT-4010-F
Course Length: 2 Hours

In this course, you will learn the essentials of importing and exporting data and data analysis using Mathcad Prime. You will understand how it reinforces Mathcad Prime’s data exchange and analysis functionality using clear, straightforward instruction and examples.

You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

• Import and export data
• Smooth, interpolate, and regress data

Prerequisites

• Mathcad Prime 3.0 – Application Orientation
• Mathcad Prime 3.0 – Plotting

Audience

• This course is intended for the novice or intermediate Mathcad user.
Table of Contents

Module 1 Data Exchange
Module 2 Data Analysis
Design of Experiments Using Mathcad Prime 3.0

Overview

Course Code: WBT-4011-0
Course Length: 2 Hours

In this course, you will learn how to use several design functions found within Mathcad. This course is designed for users who want to use Mathcad to analyze data resulting from experiments designed to understand the relationship between input variables and response variables in a system or process. You will complete Pro/FICIENCY skills assessment questions for this course. These questions are used to help reinforce your understanding of the course topics and form the basis for daily review sessions.

Course Objectives

• Understand the basics of experimental design
• Create design matrices
• Create screen factors
• Perform a regression analysis
• Perform a Monte Carlo simulation

Prerequisites

• Mathcad Prime 3.0 Essentials

Audience

• This course is intended for intermediate or advanced users of Mathcad.

Mathcad Prime 3.0 Integration with Creo Parametric 2.0

Overview

In this course, you will learn how to use Mathcad Prime and Creo Parametric in conjunction with one another. This course is designed for users who are already familiar with both Mathcad Prime and Creo Parametric. You will complete Pro/FICIENCY skills assessment questions for each topic. These questions are used to help reinforce your understanding of the course topics.

Course Objectives

- Understand license and software requirements
- Map variables in Mathcad Prime to receive information from Creo Parametric
- Map variables in Mathcad Prime to return information to Creo Parametric
- Perform a Mathcad analysis in Creo Parametric

Prerequisites

- Mathcad Prime 3.0 Essentials or equivalent experience
- Introduction to Creo Parametric or equivalent experience

Audience

- This course is intended for design engineers and mechanical designers. People in related roles will also benefit from taking this course.
